Neurosurgery

Provider: Loganathan, Amritraj, MD (Neurological Surgery)

Primary diagnosis: Prolapsed lumbar disc

Reason for Visit: Back Pain; Referred by Hospital, Duane Waters

Progress Notes

Loganathan, Amritraj, MD (Physician) • Neurological Surgery

Chief Complaint

Patient presents with

- Back Pain

1

HFAH
NEUROSURGICAL
CONSULT

HISTORY OF PRESENT ILLNESS: Derico Thompson is a 46 y.o. male who has had several years of low back pain and pain shooting into the posterior aspect of his legs. One session of PT did not help. Injections did not provide lasting relief.

On a scale of 1 to 10 with 10 being the worst, the patient describes the pain as a 7.

The patient describes the quality of the pain as throbbing.

No past medical history on file.

No past surgical history on file.

SKIN/INTEGUMENTARY
warm and dry

REVIEW OF GENITAL DATA

DIAGNOSTIC TESTS**IMAGING**

Independent Review of Images/Tracings: I independently reviewed the MRI of the lumbar spine, and my interpretation is as follows: there are disc bulges at L4/5 and L5/S1 in the setting of a congenitally narrow canal.

ASSESSMENT AND PLAN

This is a 46 y.o. year-old male patient who has back and leg pain. It sounds as though he has been offered a decompression and fusion by another surgeon. At this time, I would not recommend surgery for him.

Additional Documentation

Vitals: BP 120/75 Pulse 67 Temp 36.7 °C (98 °F) Resp 17 Wt 71.2 kg (157 lb) SpO2 97% Pain Sc 8 (Loc: Back)
